

Digital Time Relay with Display

This digital time relay is designed for precise time control in a range of applications. It features a digital display that allows easy monitoring and adjustment of time settings.

Product Overview

Precision Timing Control

The JS11S digital time relay is engineered for precise time control in diverse industrial environments. Featuring a clear digital display, it allows for effortless monitoring and accurate adjustment of timing settings. This reliable device is ideal for industrial automation and complex control systems requiring consistent performance and seamless integration.

Technical Specifications

Model	JS11S
Device Type	Digital Time Relay

Key Features

Interface

Digital Display • User-Friendly

Applications

Typical Applications

- Industrial Automation
- Control Systems
- Precision Timing Tasks
