

Digital TV Broadcasting Encoder Modulator

Professional digital video broadcasting equipment is designed for encoding, modulation, and transmission of digital television signals. It features real-time encoding, multiple modulation schemes, and support for various input and output interfaces.

Product Overview

Professional Broadcasting Solution

This digital video broadcasting equipment is engineered for high-performance encoding, modulation, and transmission of digital television signals. It is designed to meet the rigorous demands of broadcast stations, cable operators, and satellite service providers. With support for real-time encoding and versatile input/output interfaces, it ensures reliable signal delivery for professional-grade infrastructure.

Technical Capabilities

Supported Standards

DVB

Core Functions

Real-time Encoding, Signal Modulation, Signal Transmission
