

Digital Uninterruptible Power Supply

These UPS systems provide reliable backup power and surge protection. They feature digital control panels, modular designs, and robust construction suitable for data centers, industrial automation, and medical equipment.

Overview

Professional Power Protection

This high-capacity uninterruptible power supply (UPS) system is specifically engineered for critical infrastructure and industrial environments. It provides essential backup power and robust surge protection to guarantee continuous operation for data centers, industrial automation, and medical equipment. Featuring a digital control panel and modular scalability, this unit offers reliable performance in the most demanding settings.

Technical Specifications

Rated Power Capacity

200 kVA
Capacity

System Type

Digital UPS

Key Features

Digital Control Panel, Modular Design, Surge Protection, Scalable

Applications

Recommended Industries

- Data Centers
- Industrial Automation
- Medical Equipment
- Critical Infrastructure
