

Double Bucket Material Forming Unit

This heavy-duty double bucket forming unit is designed for mining and construction applications. The machinery is engineered for efficient rock drilling and piling operations.

Overview

Heavy-Duty Material Forming

This double bucket forming unit is engineered specifically for demanding mining and construction environments. It features a robust, durable frame and an integrated hydraulic system designed for precise control during rock drilling and piling operations. Built for high-volume material handling, this unit provides the reliability and efficiency required for large-scale industrial projects.

Technical Specifications

Key Features

- Double bucket configuration
- Heavy-duty frame construction
- Precision hydraulic control system

Operational Focus

High-Volume Handling • Material Shaping

Primary Applications

Mining, Construction, Rock Drilling, Piling
