

Double Drum Road Roller

This double drum road roller is designed for soil compaction and asphalt paving. It features dual smooth drums for efficient and uniform compaction, along with a comfortable operator cabin.

Overview

Heavy-Duty Compaction Performance

The double-drum roller is a robust construction machine engineered for high-efficiency soil compaction and asphalt paving. Designed with a heavy-duty frame and dual smooth drums, it ensures uniform results across large-scale projects like road construction and parking lots. The unit prioritizes operator comfort and control, featuring an ergonomic cabin with excellent visibility and intuitive operation.

Key Features

Operational Capabilities

- Hydrostatic drive system
- Advanced vibration control
- Integrated water sprinkling system
- Ergonomic operator cabin

Ideal Applications

Road Construction, Asphalt Paving, Soil Compaction, Parking Lots
