

Double Flanged 90 Degree Pipe Bend

This double flanged 90-degree bend is a robust industrial component designed for fluid or gas handling systems. Its precise 90-degree angle facilitates efficient directional changes in pipelines.

Overview

Double Flanged 90 Degree Pipe Bend

This double flanged 90-degree bend is a robust industrial component designed for efficient fluid or gas handling systems. It features flanges on both ends that conform to standard drilling patterns, ensuring secure and leak-proof connections in demanding environments. Constructed from durable materials, this fitting offers high resistance to pressure and corrosion, making it ideal for critical infrastructure applications including chemical processing, water treatment, and power generation.

Standards & Compliance

Compliance Standards	BS4772, EN545, ISO2531
----------------------	------------------------

Technical Details

Suitable Applications

- Chemical Processing
- Water Treatment
- Power Generation

Bend Angle	90 degrees
Connection Type	Double Flanged
