

Double Flanged Industrial Pipe

This double flanged pipe features flanges on both ends for secure connections. It is designed for industrial applications needing robust and leak-proof connections.

Product Overview

Double Flanged Industrial Pipe

This double flanged pipe is engineered for robust industrial applications, designed to provide secure and leak-proof connections in fluid and gas transfer systems. Featuring flanges on both ends, it allows for reliable bolting to other piping components. The product is manufactured to comply with international standards including BS4772, EN545, and ISO2531, ensuring compatibility and quality in demanding infrastructure environments.
