

Double Gang Rocker Light Switch with Indicator

This double gang light switch features two individual rocker switches mounted on a single rectangular faceplate. Each switch has a gray actuator with a green indicator light, indicating the switch's on/off status.

Overview

Classic South American Style Wall Switch

The 118Z type wall switch is a classic solution specifically developed for the South American market. This double gang unit features two individual rocker switches on a single rectangular faceplate, providing efficient control for multiple lighting circuits. Constructed from durable PC and ABS materials, it is designed to withstand the rigors of residential and commercial use while maintaining a modern aesthetic.
