

Double Layer Blow Molding Machine with In-Mold Labeling

This blow molding machine features double layer capability with a view stripe and a single station with a double die head. It includes thickness control and an automatic deflasher, along with in-mold labeling.

Overview

High-Efficiency Blow Molding Solution

This double-layer blow molding machine is engineered for precision and high-volume production of plastic containers. It features an advanced in-mold labeling system and integrated thickness control to ensure consistent quality. Designed for versatility, it supports a wide range of materials and includes an automatic deflasher for streamlined, efficient manufacturing.

Technical Specifications

Maximum Capacity	4 L
Number of Die Heads	2
Number of Stations	1

Features

Key Capabilities	Double Layer, View Stripe, In-Mold Labeling, Thickness Control, Automatic Deflasher
------------------	---

Material Compatibility

Supported Materials

- PE
- PP
- EVA
- ABS
- PVC
- K-Resin
- TPU
- Nylon
