

Double Split Shaft Collar

This double split shaft collar is designed for secure and precise shaft clamping. The two-piece design allows easy installation and removal without disassembling other components.

Product Overview

Professional Grade Shaft Security

The Double Split Shaft Collar provides a robust and reliable solution for secure shaft clamping in industrial environments. Its two-piece construction facilitates simple installation and removal without the need to disassemble surrounding components. Engineered for high performance, this collar ensures strong holding power while minimizing potential damage to the shaft.

Design Features

Construction	Two-piece double split design
Installation	Easy installation, No disassembly required, Flush outer profile

Performance

Holding Power High holding power • Minimal shaft damage	
Hardware	Recessed screws for flush profile
