

Doubly-fed Generator for Industrial Power

High-performance generator designed for robust and efficient energy conversion. It is engineered for demanding industrial applications, providing reliable power generation with advanced control features.

Overview

High-Performance Energy Conversion

The YRF series doubly-fed generator is engineered for robust and efficient energy conversion in demanding industrial environments. Designed for reliability, this unit offers advanced control features to ensure stable power generation under various operational conditions. Its durable construction is built for longevity with minimal maintenance requirements, making it an ideal choice for diverse industrial power solutions.

Technical Specifications

Series Name	YRF Series
Application	Industrial Power, Energy Conversion

Operational Features

Performance Highlights

1 High

Operational Efficiency

24 Minimal

Maintenance Frequency
