Overview

High-Performance Downhill Suspension

This downhill mountain bike front shock absorber is engineered for maximum performance and reliability in demanding riding conditions. Featuring a robust 6061 aluminium construction and a dual-crown design, it offers superior stiffness and control on rough terrain. Riders can fine-tune their suspension experience using the integrated external compression and rebound adjusters.

Technical Specifications

Material	6061 Aluminium
Spring Mechanism	Coil spring

Dimensions

Total Length	750 mm
Travel	215 mm
Crown Pitch	110 mm
Axle Hole Diameter	20 mm

Features

Design Features

- Dual-crown design for increased stiffness
- Advanced damping technology
- Coated stanchions for reduced friction

Adjustability	External Compression, Rebound Adjuster
