

Drilling and Milling Machine with Gear Head

This gear head drilling and milling machine provides variable speed control through a rotary dial for diverse machining tasks. Featuring a robust milling head and versatile work table, it ensures stability and accuracy in drilling, milling, and metalworking.

Overview

Versatile Gear Head Drilling and Milling Machine

The DM450FG-1 is a robust, dual-purpose machine tool engineered for precision drilling and milling operations. Featuring an all-steel gear drive and dovetail slide construction, it offers exceptional stability and smooth movement for demanding metalworking tasks. With its tilting gear head and adjustable spindle power feed, this machine is an ideal solution for workshops and small-scale production environments requiring high accuracy.

Technical Specifications

Spindle Power Feed Steps	6 steps
Gear Head Tilt Range	45° left and right
Slide Construction	Dovetail

Key Features

Positive Locking Systems

- Table
- Head
- Quill
- Column

Precision Components

All-steel gear drive • Tapered gibs • Digital depth ruler • T-slot work table

Core Capabilities

Drilling, Milling, Variable Speed, Fine Downfeed
