

Drying Machine Motor

This high-efficiency motor is designed for drying machine applications and features a robust construction for extended durability. The motor is engineered for optimal performance in air conditioners and ventilation equipment, ensuring reliable operation and consistent airflow.

Overview

High-Efficiency Drying Motor

This high-efficiency motor is specifically engineered for drying machine applications, offering robust construction for extended durability. Designed for seamless integration into household appliances, it delivers reliable operation and consistent airflow while maintaining a compact footprint. Its energy-efficient design minimizes power consumption, ensuring both performance and cost-effectiveness for your equipment.

Technical Specifications

Model Number	YSL-55L4-M8L-20675
Voltage	220 V
Frequency	50/60Hz
Rated Current	0.25 A
Power Output	10 W

Standards & Compliance

Insulation Class	CL.B
IP Rating	IP42
Manufacturing Date	2022.06

Key Performance Metrics

Performance Highlights

10 W Power	0.25 A Current
