Product Overview

Professional Dual Channel Wireless Audio

This dual-channel wireless microphone system is engineered for reliable, clear audio transmission in professional settings. Utilizing PLL oscillation technology and a wide 76MHz bandwidth, it ensures stable signal performance for public speaking, performances, and event hosting. The robust construction and user-friendly interface make it an ideal choice for diverse sound reinforcement applications.

Technical Specifications

| | |
|---------------------|--------------------|
| Frequency Range | 600-700 MHz |
| Bandwidth | 76 MHz |
| Frequency Stability | 10PPM (-10 to 50) |
| Oscillation Mode | PLL |
| Modulation | FM |

Performance Metrics

Key Performance Metrics

25 mW

RF Power

65 dB

Harmonic Suppression

75 K

Maximum Modulation

Power Requirements

Power Specifications

- Operating Voltage: 9V x 2
- Working Current: 110mA
