

Dual Column Vertical Machining Center

This is a machining center with dual vertical columns. It is designed for machining large, heavy workpieces.

Overview

High-Performance Machining Capability

This Dual Column Vertical Machining Center is engineered for heavy-duty industrial applications, offering robust stability and precision. The dual-column architecture provides enhanced structural rigidity, making it ideal for machining large, complex workpieces. Designed for professional manufacturing environments, this machine ensures consistent performance and reliability for demanding production schedules.

Technical Specifications

Primary Application

Heavy-Duty Machining • Large Workpiece Processing

Machine Type

Dual Column Vertical Machining Center

Design Features

Dual Column Architecture, Horizontal Worktable, Industrial Grade
