

Dual-End Automatic Wire Crimping Machine

This automatic crimping machine is designed for high-volume, precise crimping of wires at both ends. It features a robust construction and an advanced control system for synchronized operation and real-time monitoring.

Overview

High-Efficiency Dual-End Processing

This automatic wire processing machine is engineered for high-volume production environments, capable of performing simultaneous cutting, stripping, and crimping on both ends of a wire. Designed for precision and reliability, it achieves a processing speed of 2800 pieces per hour. Its robust construction and intuitive control system make it an ideal solution for industrial wire harness manufacturing.

Performance Metrics

Processing Speed

2800 pcs/hr

Output Rate

Technical Specifications

| | |
|--------------|---------------|
| Voltage | 220V, 2-Phase |
| Air Pressure | 0.75 MPa |

Capabilities

| | |
|----------------------|---|
| Supported Operations | Automatic Cutting, Stripping, Dual-End Crimping |
