

Ductile Iron Pipe for Trenchless Installation

Ductile iron pipes facilitate trenchless installation, reducing excavation needs. This method is ideal for urban environments, minimizing surface disruption during installation.

Product Overview

Ductile Iron Pipe for Trenchless Installation

Engineered for high-demand infrastructure projects, these ductile iron pipes are specifically designed for trenchless installation methods, significantly minimizing surface disruption in urban environments. With diameters ranging from DN80 to DN2600mm, these pipes offer robust durability and versatility. They are manufactured to meet high technical standards, ensuring reliability for cross-regional water and utility pipeline projects.

Technical Specifications

Standard Lengths

- 6
- 8.15

Key Performance Indicators

38000 km

Annual Production Capacity

Available Diameter Range

DN80 to DN2600mm

Certifications & Standards

Compliance & Quality Certifications

ISO9001, ISO14001, GB/T28001, French BV, Korea KS
