

Ductile Iron Pipe Support with Flanged Ends

This ductile iron pipe support is designed for robust and secure pipe mounting. It features flanged ends for connection to pipes and mounting holes for secure attachment to a surface, ensuring stability and alignment in various piping systems.

Product Overview

Robust Ductile Iron Pipe Support

This pipe support is engineered from high-quality ductile iron, offering exceptional durability and structural integrity for demanding piping systems. Featuring a cylindrical body design with flanged ends, it ensures precise pipe alignment and secure mounting. The integrated base with mounting holes allows for stable attachment to surfaces, making it a reliable choice for industrial piping infrastructure.

Technical Specifications

Design Features

- Cylindrical body
- Flanged ends for secure connection
- Surface-mount compatible base
- Integrated threaded port

Material	Ductile Iron
Connection Type	Flanged Ends
Mounting Features	Base Mounting Holes, Threaded Side Port
