

Dumbbell-Shaped Plastic Machinery Component

This is a green plastic component with a dumbbell shape, commonly used in machinery. The component features a central cylindrical section with flared ends.

Overview

Dumbbell-Shaped Machinery Component

This specialized dumbbell-shaped component is engineered for precision performance within plastic and rubber machinery systems. Featuring a robust central cylindrical design with flared ends, it provides structural stability and reliable operation in industrial environments. Its durable construction ensures compatibility with a variety of machinery configurations, making it an essential part for maintenance and assembly.

Physical Dimensions

Total Length	14.8 units
Flared End Width	4.2 units

Material & Design

Color	Green
Shape	Dumbbell

Application

Compatible Machinery Types	Plastic Machinery, Rubber Machinery
