

E6TC Spark Plug for Motorcycle Engines

The E6TC spark plug is designed for optimal performance in motorcycle engines. It features durable construction with a robust electrode and insulator, ensuring reliable ignition and extended service life.

Product Overview

High-Performance E6TC Spark Plug

The E6TC spark plug is engineered to provide reliable ignition and efficient combustion for motorcycle engines. Featuring a 95% pure alumina insulator and a copper core electrode, this plug ensures excellent heat dissipation and consistent performance. Its durable construction, including a nickel-plated housing and multi-layer gaskets, offers superior resistance to oxidation and corrosion for an extended service life.

Technical Specifications

Insulator Material	95% Pure Alumina
Electrode Core Material	Copper
Housing Finish	Nickel Plated
Insulator Design	Multi-ribbed

Performance Features

Key Benefits

- Eliminates flash over with multi-ribbed design
- Superior heat dissipation via copper core
- Gas-tight fit via heat crimping process
- Strong elasticity and sealing with multi-layer gaskets
- Prevents engine overheating

Available Variants	Platinum, Iridium, Resistor, Gas, V-grooved, Pointed, Multi-electrode, Standard
