

Earthmoving Construction Vehicle

This heavy-duty construction vehicle is designed for demanding construction, mining, and infrastructure projects. It is equipped with a high-capacity loading arm, a reinforced excavator bucket, and a durable bulldozer blade for efficient earthmoving and material handling.

Overview

High-Performance Earthmoving Solution

This heavy-duty construction vehicle is engineered for versatility, combining loading, excavating, and bulldozing capabilities into one robust platform. Designed for demanding infrastructure, mining, and construction environments, it features a reinforced chassis and advanced hydraulic systems for maximum productivity. With precision controls and enhanced operator safety features, this machine ensures reliable performance in the most challenging terrains.

Technical Specifications

Model Identifier	H-313
Equipment Features	High-capacity loading arm, Reinforced excavator bucket, Durable bulldozer blade, Advanced hydraulic system

Performance

Core Functions

- Loading
- Excavating
- Bulldozing

Suitable Applications

Construction • Mining • Infrastructure Projects
