

Electric Actuator for Monitor

This electric actuator is designed for use with monitors in irrigation systems. It provides precise control for automated operation in demanding environments.

Product Overview

Industrial Precision Control

The XFP1A series electric actuator is engineered for reliable and precise control of valves within agricultural drainage and irrigation systems. Built for demanding environments, this unit features a robust construction designed to withstand complex operating conditions while providing real-time feedback on valve position. Its automated monitoring capabilities help optimize water usage and prevent system downtime, making it a critical component for efficient water management.

Standards and Compliance

Explosion-Proof Grade

Ex dIIBT4

Certified Standards

JB/T8528-1997, GB3836.1-2000, GB3836.2-2000, GB4208-1993

Technical Specifications

IP Protection Grade

Compliant with GB4208-1993

Application

Target Applications

- Agricultural drainage systems
- Irrigation networks
- Pump control operations
- Flow control device automation
