

Electric Chain Hoist

This electric chain hoist is designed to lift loads at low speeds. It utilizes a plate-type braking motor and reducer for efficient, reliable braking and ease of maintenance.

Product Overview

DHP Series Electric Chain Hoist

The DHP series low-speed endless chain motor lifting block is a compact and efficient solution designed for versatile industrial lifting. Built upon the foundation of the HSZ type chain block, it features a plate-type braking motor and a robust reducer system. This hoist is engineered for reliability, ease of maintenance, and safety, making it an ideal choice for equipment installation, mining, and engineering construction tasks.

Technical Specifications

Lifting Capacity

7.5 TON

Capacity

Key Features

Low Speed, Compact Design, Plate Type Braking Motor, Easy Maintenance

Applications

Suitable Applications

- Loading and unloading operations
- Equipment installation
- Mining operations
- Engineering construction
