

Electric Motorized Ball Valve

This motorized ball valve is designed for automated control of fluid flow. The electric actuator provides reliable and precise operation.

Product Overview

Automated Flow Control

This electric motorized ball valve is engineered for precise, automated fluid flow management across demanding environments. Featuring a durable brass valve body, it ensures excellent corrosion resistance and long-term reliability. The integrated electric actuator facilitates seamless remote control and monitoring, making it an ideal solution for HVAC systems, industrial automation, and water treatment infrastructure.

Technical Specifications

Body Material	Brass
Actuation	Electric

Applications

Suitable Applications	HVAC Systems, Industrial Automation, Water Treatment
-----------------------	--

Key Features

Performance Highlights

1 High Corrosion Resistance	1 Capable Remote Operation
---------------------------------------	--------------------------------------
