

Electric Space Heater with Adjustable Pedestal

This is a standalone electric space heating apparatus. It features a circular heating element protected by a wire mesh grill, mounted on an adjustable-height pedestal stand.

Product Overview

Efficient Localized Heating

This electric space heater is engineered to provide reliable and consistent warmth for indoor environments. Featuring an adjustable-height pedestal stand, the unit allows for precise positioning to direct heat where it is needed most. With a durable circular heating element protected by a safety wire mesh, it combines safety with high-performance heating capability.
