

Electric Spindle Turning-Milling Compound Machine Tool

This electric spindle is designed for lathes and features a national patent. It can clamp, mill, drill, and replace grinding with turning.

Overview

Intelligent Turning-Milling Compound Machine

The HTC400-D is an intelligent electric spindle turning-milling compound machine tool designed for precision metal cutting. By combining turning and milling capabilities into a single setup, it enables complex machining operations while significantly reducing cycle times. This versatile machine features a high-speed electric spindle that ensures efficient material removal and superior surface finishes for modern manufacturing environments.
