

Electric Water Pump, 0.37kW, 220V

This electric water pump features a two-pole induction motor and Class B insulation. It is designed for continuous service with IP44 protection and includes a thermal protector.

Product Overview

Compact and Reliable Performance

This electric water pump is designed for efficient water distribution, suitable for both domestic applications and garden irrigation. Engineered for reliability, it effectively handles clean water without abrasive particles, making it an ideal choice for pressure sets and tank extraction. Its compact design ensures easy installation, provided the unit is sheltered from inclement weather.

Technical Specifications

Electrical Characteristics

Parameter	Value
Rated Current	3.5 A
Capacitance	2.5 μ F
Capacitor Voltage	450 V

Rated Power 0.37 kW

Input Voltage 220 V

Frequency 50 Hz

Performance Metrics

Operating Capacity

33 L/min
Max Flow Rate

33 m
Max Head

2900 r/min
Rotation Speed

Features

Included Components

- Flap-check valve

Suitable Applications

Domestic Water Supply, Garden Irrigation, Pressure Sets, Tank Water Extraction
