

Electrical Contact Rivets - Copper Alloy

Contact rivets are designed for electrical applications requiring reliable connections. Manufactured from copper alloy with precision, these rivets offer excellent conductivity and durability.

Overview

High-Performance Electrical Contact Rivets

These precision-engineered contact rivets are designed for critical electrical applications, offering superior conductivity and durability. Constructed from high-quality copper alloy with silver contact points, they ensure reliable performance in demanding switching environments. They are an essential component for manufacturers of wall switches, push buttons, AC contactors, and relays.

Technical Details

Material Composition	Copper Alloy with Silver Contact
-----------------------------	----------------------------------

Applications

Common Applications

- Wall Switches
- Push Button Switches
- AC Contactors
- Relays

Certifications

Compliance Standards	CE, ISO 9001
-----------------------------	--------------
