

Electrical Load Center

This electrical load center is designed for efficient power distribution. It is suitable for residential, commercial, and industrial applications.

Overview

Professional Electrical Distribution

This series of electrical load centers is engineered for reliable power distribution across residential, commercial, and industrial environments. Featuring robust construction, these units ensure safe and organized circuit management. The design includes accessible busbars, neutral bars, and grounding bars for efficient installation and maintenance, providing a durable solution for modern electrical infrastructure.

Technical Specifications

Key Design Features

- Robust construction
- Visible busbar layout
- Integrated neutral bar
- Dedicated grounding bar
- Protective door with wiring diagram

System Standards

Circuit Protection Ready • Standardized Wiring

Suitable Applications

Residential, Commercial, Industrial
