

Electro-Hydraulic Steel Bar Bending Machine

This electro-hydraulic machine efficiently bends steel bars and cables. Its hydraulic system ensures powerful, precise bending controlled by an electric motor.

Product Overview

Electro-Hydraulic Steel Bar Bending Machine

The RB-25 is a robust electro-hydraulic bending solution engineered for precise steel bar manipulation in construction and industrial settings. Designed for efficiency, this machine provides consistent power to bend rebar within a range of 6mm to 25mm. Its compact yet heavy-duty build ensures reliability on job sites while maintaining the flexibility required for various bending applications.

Technical Specifications

Performance Metrics

25 MM

Max Rebar Capacity

6 MM

Min Rebar Capacity

1700 W

Max Wattage

Power Requirements

220V, 110V

Physical Dimensions

Weight and Dimensions

Metric	Value
Machine Weight	91 Kg
Gross Weight	109 Kg
Machine Size	450 x 500 x 440 MM
Carton Size	500 x 555 x 505 MM

Compliance and Packaging

Certifications

CE • ROHS

Package Includes

- 1x Bending Machine
- 1x Metal Storage Box
- 1x Cardboard Outer Carton
