

Electromagnetic Braking AC Motor

These three-phase asynchronous motors feature electromagnetic braking. They are suitable for industrial applications requiring precise control and reliable braking.

Product Overview

Electromagnetic Braking Three-Phase Asynchronous Motor

This series of aluminum electromagnetic braking three-phase asynchronous motors is engineered for industrial applications that demand precise motion control and reliable braking performance. Designed for durability and efficiency, these motors offer a robust solution for machinery requiring frequent starts, stops, and holding capabilities. The aluminum construction ensures a lightweight yet durable build suitable for diverse commercial and industrial environments.

Technical Specifications

Motor Type	Three-phase asynchronous motor
Braking Mechanism	Electromagnetic
Housing Material	Aluminum

Certifications & Standards

Compliance	CE, CELS
------------	----------
