

Electronic Ballast Driver

This electronic ballast driver is designed for LED lighting applications. It provides the voltage and current necessary to power LEDs.

Overview

Professional Electronic Ballast Driver

This electronic ballast driver is engineered for reliable performance in industrial and commercial lighting applications. Designed to regulate the power supply to fluorescent or LED lighting systems, it ensures stable operation and longevity for your lighting infrastructure. Its robust construction and precise electrical ratings make it an essential component for professional lighting setups.

Technical Specifications

Application	Industrial Lighting, Commercial Lighting
Component Type	Electronic Ballast / Driver
Form Factor	Rectangular
Housing Color	White
