

Electroplated Grinding and Cutting Wheels

Electroplated wheels are designed for precision grinding and cutting applications. These wheels feature a durable electroplated bond that securely holds abrasive particles, ensuring consistent performance and extended lifespan.

Product Overview

Precision Electroplated Wheels

These electroplated grinding and cutting wheels are engineered for high-precision material removal and finishing tasks. Utilizing a durable electroplated bond, the wheels securely retain abrasive particles to ensure consistent performance throughout their lifespan. They are an ideal solution for processing hard and brittle materials, delivering both efficiency and superior surface quality.

Technical Specifications

Material Suitability

- Hard materials
- Brittle materials

Primary Applications

Grinding, Cutting, Material Removal, Surface Finishing

Bond Type

Electroplated

Availability

Available Options

Various Sizes • Multiple Grit Options
