

Elevator and Funicular Drive Unit

This is a drive unit designed for elevator and funicular car systems. It features a heavy-duty construction with a reinforced base and a ventilation system.

Product Overview

High-Performance Drive Solution

This industrial-grade drive unit is specifically engineered for high-demand elevator and funicular applications. Featuring a robust, heavy-duty construction, it is designed to withstand rigorous operational environments while ensuring consistent power delivery. The integrated enclosure and cooling system provide essential protection and thermal management for reliable, long-term performance.

Technical Specifications

Construction Features

- Heavy-duty industrial enclosure
- Integrated ventilation and cooling system
- Reinforced mounting base
- High-torque transmission gearbox

Design Attributes

Weather Resistant • Noise Reducing • Stationary Application

Application

Elevator Systems, Funicular Systems, Industrial Drive
