

Elevator Component for Construction Machinery

This elevator component is suitable for use in construction machinery. It features a metallic housing and connection ports for fluid or air lines.

Product Overview

Heavy-Duty Elevator Component

This robust elevator component is engineered for demanding construction and agricultural machinery applications. Designed with a durable metallic housing and precision-engineered shaft, it provides reliable performance in heavy-duty environments. The integrated connection ports facilitate seamless integration into existing hydraulic or pneumatic systems, ensuring operational efficiency and longevity.

Technical Details

Build Quality

Heavy-Duty • Industrial Grade

Component Type

Elevator Actuator

Suitable Sectors

Construction Machinery, Agricultural Equipment, Cranes

Connection Ports

Fluid/Air Line Ready
