

Enclosed Heavy-Duty Hook Group for Lifting

This heavy-duty, totally enclosed hook group is designed for lifting and material handling applications. The hook group features a robust construction with multiple sheaves for increased lifting capacity and reduced cable wear.

Product Overview

Heavy-Duty Enclosed Hook Group

This totally enclosed hook group is engineered for demanding lifting and material handling applications. Featuring a robust, high-strength steel construction, it includes a safety latch to ensure secure load management during operation. The enclosed yellow housing provides critical protection for the internal sheaves and cables against environmental factors, promoting longevity and consistent reliability in crane and hoist systems.

Technical Specifications

Design Features

- Totally enclosed design
- Multi-sheave configuration
- Integrated safety latch
- Environmental protection housing

Material

High-strength steel

Operational Benefits

Operational Advantages

Reduced cable wear, Increased lifting capacity, Environmental protection, Smooth operation

Applications

Compatible Equipment

- Cranes
- Hoists
- General lifting equipment
