

Engine Cylinder Block

Precision-engineered for optimal performance and durability. Constructed from high-strength cast iron, featuring meticulously machined cylinder bores and coolant passages for efficient heat dissipation.

Overview

Precision-Engineered Engine Cylinder Block

This engine cylinder block is precision-engineered to deliver optimal performance and long-term durability. Constructed from high-strength cast iron, it features meticulously machined cylinder bores and coolant passages designed for efficient heat dissipation. It is built to withstand high combustion pressures, ensuring reliable operation across automotive, industrial, and marine applications.

Technical Specifications

Suitable Applications

Automotive • Industrial • Marine

Material	High-strength cast iron
Reference Identifiers	2522, 320, 3903795

Design Features

Key Design Features

- Meticulously machined cylinder bores
- Optimized coolant passages for heat dissipation
- High-pressure combustion resistance
- Strategically placed mounting points for easy integration
