

Engine Oil Pump for Gasoline Engines

High-performance engine oil pump designed for optimal lubrication and oil pressure regulation. It ensures consistent oil flow to critical engine components, enhancing performance and extending engine life.

Overview

High-Performance Engine Oil Pump

This engine oil pump is engineered to provide optimal lubrication and precise oil pressure regulation for gasoline and gas engines. Featuring a robust housing and precision-engineered gears, it ensures consistent oil flow to critical engine components. Its durable drive mechanism is designed to enhance overall engine performance and significantly extend engine service life.

Technical Specifications

Key Features

- Robust housing construction
- Precision-engineered gears
- Durable drive mechanism
- High-quality material composition

Reliability Focus

Consistent Flow • Extended Engine Life • High Durability

Engine Compatibility

Gasoline Engines, Gas Engines

Primary Function

Optimal lubrication and oil pressure regulation
