

Equatorial Telescope Mount

Precision equatorial mount designed for astronomical observations. It features fine adjustment controls for right ascension and declination, allowing for accurate tracking of celestial objects.

Product Overview

Precision Equatorial Mount

The EM4 equatorial mount is a precision-engineered tool designed specifically for astronomical observations. It features fine adjustment controls for both right ascension and declination, ensuring highly accurate tracking of celestial objects throughout the night. Built with durable, high-quality materials, this mount provides the stability and smooth movement required for professional-grade viewing experiences.

Technical Specifications

Compatibility

- Various telescopes
- Optical instruments

Model	EM4
Tracking Axes	Right Ascension, Declination

Features

Construction

Durable Materials • High Stability • Smooth Movement

Adjustment Controls	Fine adjustment for RA and Dec
