

European Type Pneumatic Cylinder

This pneumatic cylinder is a European type SE series. It features a double-acting configuration for precise control of linear motion in industrial applications.

Product Overview

SE Series European Type Pneumatic Cylinder

The SE Series European type pneumatic cylinder is engineered for high-performance industrial automation. It features a robust double-acting configuration that provides precise linear motion control for various machinery applications. Designed for durability, this compact component ensures reliable operation even in demanding industrial environments.

Technical Specifications

Operation

Double-acting

Sample Specifications

- Bore: 20mm
- Stroke: 5mm
- Series: SE

Core Metrics
