

Excavator Shell Bucket

The shovel bucket, also known as a digger bucket, is installed on an excavator. These buckets are divided into backhoe and shovel buckets, with the backhoe being the more common type.

Product Overview

High-Performance Shell Bucket

This heavy-duty shell bucket is engineered for excavators and construction machinery, providing exceptional durability for demanding site environments. Built with high-strength steel and precision welding, it offers a long service life and reliable structural integrity. It is an ideal solution for efficient excavation, loading, and material handling tasks involving loose materials like sand, gravel, and soil.

Construction & Design

Main Components

- Tooth base plate
- Bottom plate
- Side plate
- Wall plate
- Lug plate
- Bucket tooth
- Tooth seat

Manufacturing Standard

Professional-grade structural welding ensures maximum service life and structural strength.

Applications

Compatible Machinery

Excavators • Construction Machinery

Material Handling

Sand, Gravel, Soil, Excavation, Loading
