Product Overview

High-Performance Speed Reducer Assembly

This robust speed reducer assembly is a critical component in the excavator's drive system, engineered to convert high-speed motor output into the high-torque power necessary for heavy-duty excavation tasks. Designed for reliability and durability, the unit features a precision-engineered gear system housed within a protective, corrosion-resistant casing. It is built to withstand demanding operational conditions, helping to minimize downtime and maximize productivity on the job site.

Compatibility

Compatible Excavator Models

ZAX200, ZAX250, ZAX270, ZAX330, ZAX360, ZAX450

Technical Specifications

Component Function

Walking Speed Reducer • Rotary Speed Reducer

Available Related Parts

- Hydraulic Pump
- Distributor
- Cab
- Oil Cylinder
- Arm
- Scarifier
- Scraper Bucket
