

Fabric Roll Stacking Machinery for Garments and Shoes

Machinery designed for stacking fabric rolls. It is suitable for optimizing material handling and storage in garment and shoe manufacturing.

Product Overview

Professional Fabric Roll Handling

This specialized stacking machinery is designed to optimize the storage and organization of cylindrical fabric rolls used in garment and shoe manufacturing. By providing a stable and structured stacking solution, it helps maintain material integrity and maximizes floor space efficiency. The system is engineered to handle various textile patterns and material types, ensuring a seamless workflow for textile processing facilities.

Technical Details

Compatible Materials

- Floral patterned textiles
- Paisley print fabrics
- Geometric pattern materials
- Diverse industrial textiles

Industry Applications	Garment Manufacturing, Shoe Production, Textile Processing, Fabric Storage
Stacking Layout	Multi-column vertical stacking
