

Feed Pellet Production Line

This automated system efficiently produces granular feedstuff. It supports a range of feed pellet sizes, from 3 to 6mm or 8 to 12mm.

Overview

Complete Feed Pellet Production System

This industrial-grade feed pellet production line is designed for large-scale agricultural and feed processing facilities. It features a fully integrated, multi-level structure that automates the entire process from raw material handling to final pellet output. Built with durable, high-quality materials like stainless steel, this system ensures long-term reliability and consistent production efficiency for professional operations.

System Configuration

Included Processing Units

- Material Hoppers
- Automated Conveyors
- Industrial Mixers
- Separation Units

Construction

Primary Materials

Stainless Steel, Industrial-grade Alloys

Application

Suitable Environment

Large-scale feed processing plants • Automated production facilities
