

Fiber Optic Distribution Box

Indoor fiber optic distribution boxes facilitate network communication by connecting and distributing fiber optic cables within a building. These boxes feature multiple ports for connecting individual fiber optic lines and are enclosed in a protective housing designed for wall mounting.

Product Overview

Professional Fiber Optic Distribution

This indoor fiber optic distribution box is engineered for reliable network communication and cable management. Designed for wall-mounted installation, it provides a secure, protective housing for fiber optic connections within building infrastructures. The unit features multiple ports to facilitate organized cable distribution and long-term network stability.

Technical Specifications

Environment

Indoor

Key Features

- Protective housing enclosure
- Multiple port configuration
- Secure wall-mount design

Mounting Style

Wall Mount

Primary Application

Fiber optic cable distribution and connection
