

Fine Powder Pulverizer Mill

This high-efficiency milling machine is designed for fine powder production. It utilizes a multi-stage grinding process with air classification for precise particle size control.

Product Overview

High-Efficiency Fine Powder Production

The Type R Pulverizer is a professional-grade milling machine engineered for high-efficiency fine powder production across diverse industries. Utilizing a multi-stage grinding process, it combines primary crushing with high-speed impact milling to deliver consistent results. An integrated air classification system provides precision particle size control, while robust, wear-resistant construction ensures longevity and reduced maintenance requirements.

Technical Specifications

Grinding Stages

- Primary crushing stage
- High-speed impact milling stage

Integrated System Components

Feeding System, Grinding Chamber, Air Classifier, Cyclone Separator, Dust Collection System

Application & Performance

Suitable Materials

Minerals, Chemicals, Plastics

Control & Operation

Operational Interface

Process Monitoring • Control Panel
