

Fitting and Adapter Molds

These molds are used to create various fittings and adapters. They are essential for manufacturing components with specific dimensions and shapes.

Overview

Professional Injection Molding Solutions

These high-quality injection molds are specifically engineered for the production of PVC pipe fittings and related components. With over a decade of manufacturing expertise, these molds ensure precision and durability for complex geometries including various traps, drains, and couplings. We provide comprehensive support, from initial design consultation based on your samples or drawings to sourcing auxiliary components like rubber O-rings.
