Overview

Professional Mulching Solution

The VCD series flail mowers are multitasking machines specifically engineered for green maintenance professionals. Designed for compatibility with both front and rear tractor P.T.O. systems, these mowers prioritize durability and vibration reduction. The robust construction features an encased frame with dual beams to optimize the weight-to-rigidity ratio, ensuring reliable performance in demanding agricultural environments.

Design & Engineering

Rotor Technology	Helical cutting tool arrangement, Balanced discs, Vibration reduction
Frame Structure	Encased structure with dual separate beams (front and upper section)

Key Features

Professional Components

- Tubular skids
- Roller with bolted flanges
- Belt transmission with belt tightener

Tractor Compatibility

Front P.T.O. • Rear P.T.O.

Applications

Suitable Applications

- Pasture maintenance
- Orchards
- Vineyards
- Roadside clearing
- General vegetation management
