

Flanged Ball Valve with Pneumatic Actuator

This ball valve features a flanged connection for secure installation and reliable performance. Equipped with a pneumatic actuator, it allows for automated operation and precise control in industrial settings.

Product Overview

Industrial Floating Ball Valve System

This high-performance floating ball valve is engineered for demanding industrial flow control and shutoff applications. Equipped with a robust pneumatic actuator, it allows for reliable remote operation and precise control via integrated accessories like solenoid valves and air filter regulators. Available in durable materials such as WCB and CF8M stainless steel, this valve ensures longevity and secure performance in corrosive or high-pressure environments.

Technical Specifications

Pressure Ratings

150 Class • 300 Class

Available Sizes

- 3-inch
- 4-inch
- 6-inch

Available Body Materials

WCB, CF8M Stainless Steel

Connection Style

Flanged

Actuation & Control

Actuator Components

- Pneumatic Actuator
- Solenoid Valve
- Air Filter Regulator
- Pressure Gauge
- Position Indicator
